TWIN PRO

# Early Riser

## Seed Treatment

**Early Riser** with its full compliment of chelated trace minerals, enzyme, hormones and other biostimulants will give your crop the jump start it needs (extremely effective when spring seeding is late).

**Early Riser** treated seed generally has double sprouting, producing numerous stools, which creates the potential for greatly enhanced yields.

**Early Riser** treated seeds will produce massive root systems providing drought and stress resistance for the current crop. These huge root systems slowly decay releasing the nitrogen and micro-nutrients for the next crop.

### DIRECTIONS FOR USE:

Before mixing Early Riser with fungicides or inoculants a jar test is recommended to verify compatibility.

#### **Dilute with water:**

Early Riser is to be diluted with clean water in a ratio ranging from 1 part Early Riser to 1 part water up to 1 Early Riser to 7 parts water. The amount of water used will be determined by the seed treatment method, available time for seed to dry and the drills ability to handle damp seed.

**Cereal Grains** (wheat, oats, rice, corn, barley, rye) Apply 50 ml Early Riser per bushel or one 10 liter jug treats 200 bushel. (Dilute with water as described above)

**Legumes** (alfalfa, chickpeas, beans, peas, lentils, lupins) **OilSeeds** (soybeans, mustard, sunflower, cotton, flax, canola) and **Sugar Beets:** Apply 100 ml Early Riser per bushel or one 10 liter jug treats 100 bushel. (dilute with water as described above.)

**Potatoes:** Apply 125 ml Early Riser per bushel or one 10 liter treats 80 bushel. (dilute with water as describe above)

**Garden Vegetable:** See may be sprayed or soaked in solution of 1 part Early Riser to 3 parts water.

### PACKAGING AVAILABILITY

20 Liters

### PHYSICAL PROPERTIES

Type: Liquid

Color: Black

Odor: Odorless
