Soil Aid

Soil Inoculant

Soil-Aid is a complex concentration of biological ingredients including enzymes, hormones, humates, chelated trace minerals and many other proven biostimulants.

Soil-Aid stimulates the metabolic activity of the soil micro-organisms and enhances crop production.

Soil-Aid improves soil structure, making it soft and mellow, loosening compacted tight soils and eliminating clodding and crusting.

Soil-Aid reduces irrigation water consumption by 30 to 50% through increased penetration and retention.

Soil-Aid improves crop yield by 12 – 28% through better use of natural moisture on dry land farms.

Soil-Aid helps generate nitrate nitrogen (NO₃-n) in the soil from atmospheric nitrogen (N₂)

DIRECTIONS FOR USE:

Mix thoroughly before using.

To reduce irrigation water up to 50% use a minimum of 9 – 18 oz (250 – 500ml) per acre.

To eliminate clodding and crusting, make soil soft, mellow, more permeable and easier to till (using up to 30% less fuel) use 16 – 18 oz (450 – 500 ml) per acre.

To improve crop yield and quality through better use of natural moisture on dry-land cereal grains, oilseeds, hay etc, use 5 – 9 oz (150 – 250 ml) per acre.

For compacted, hard to manage soil and to neutralize soil pH (above 7.3 or below 6.6) and to leach surface salts below the root zone, use 16 – 18 oz (450 – 500 ml) per acre

PACKAGING AVAILABILITY:

2 x 10 Liters

PHYSICAL PROPERTIES:

Type: Liquid

Color: Black

Odor: Odorless
